Managed Firewall Services
What If You Could Manage All of Your Network Security Needs More Cost-Effectively?

Managed Firewall Services from Fiserv combines all of the products and services necessary to help you manage your network security needs and comply with industry standards—at a fraction of the cost of a full-time security administrator.

Network security services is a highly sought-after solution in the financial services industry. At Fiserv, we specialize in:

- Firewall management
- Intrusion Prevention Systems (IPS)
- Anti-virus, anti-spam and Web filtering
- Reporting
- Remote vulnerability assessments
- Virtual Private Networks (VPN)

**Continuous Protection**

To deliver around-the-clock, real-time network security, we partner with industry-leading security providers. If suspicious activity is detected, our security systems immediately repel attack attempts and deny the intruder access to the network. We customize alarm notification policies and procedures to fit the demands of your environment.

**Sophisticated Security**

When you choose Network Security Services -- one of the Sentry Performance Solutions™ offerings from Fiserv -- you gain the benefits of the largest and most customizable database of high-risk Web content available, which blocks unwanted information from entering your network through a process known as Web filtering. This comprehensive database gives you a head start on identifying and disallowing sources of undesirable information. You can classify information sources by website or by page or set your own Web usage criteria. Our virtual control agent uses neural network technology to block access to questionable sites you may not have thought to classify as unwanted.

Our gateway devices protect your network from viruses, including suspect mail and Web and file transfers. Gateway anti-virus products are not only cost-effective, they are extremely effective at identifying and stopping viruses before they reach your systems.

**Firewall Management**

With Managed Firewall Services, your financial institution can choose the way you want Fiserv to assist in the management of your security solution. Whether you want us to support your internal resources or prefer our complete, around-the-clock management service, Fiserv can help.
Data Defense System

Arm yourself with the latest defense against stealthy malicious and suspicious network activity. Our Unified Threat Management systems protect your network by detecting, recognizing and blocking malicious data signatures and anomalous events. Full content and deep packet inspection engines are proactively updated to ensure that you have the most current defense technologies available.

Detailed Reporting

Stay informed about the security of your data with information provided in a useful and understandable format. Our reporting solution offers quarterly or monthly detail options for maximum flexibility.

Virtual Private Networking (VPN)

Virtual Private Networks offer great flexibility and can provide connectivity for your branch offices as well as for your remote employees. VPN solutions provide outstanding value and ease of use, while saving you time and money.

Extendable and Expandable

Our solution offers a wide variety of options to extend and expand your network security to best fit your financial institution’s needs. Options include:

- Extended e-mail security, which provides quarantine, encryption and enhanced anti-spam and anti-virus service for e-mail
- Web applications security, which provides enhanced firewall and security for Web applications
- Extended database security, which provides vulnerability, monitoring and audit capabilities to harden databases from security issues
- Extended client endpoint security, which provides comprehensive management and control for PCs and mobile devices
- Extended reporting, which provides logging, analyzing and reporting for your network
- Vulnerability management, which provides end-point vulnerability management, inventory, auditing and reporting
- 24 x 7 monitoring, which provides around-the-clock monitoring of your network security
