

Verifast™ Access

Control Facility Access Using Secure and Reliable Biometrics

Replace your existing entry method with the security and efficiency of palm vein biometrics. Verifast Access from Fiserv offers a highly secure, reliable and easy-to-use way to control and monitor physical access to business premises or sensitive areas.

As concern about the security of business facilities and employees has grown, biometric authentication has been proven superior to other methods of identification. Access cards and fobs can be lost, stolen and shared, while personal identification numbers (PINs) can be compromised.

How It Works

Verifast Access enables your employees to scan their palms for fast, easy authentication that is virtually impossible to fake, hack or spoof. Installed next to any door, Verifast Access simply scans the individual's palm to verify, identify and grant access. The vein pattern under the skin, which is unique to every person, is matched to data stored in a secure database.

Greater Convenience

Verifast Access is fast and simple to use. An employee's identity can be verified instantaneously with the highest available accuracy. The scan unit uses lights to

provide the user with visual feedback on the scan status, so there's no guesswork. Training can be completed in under an hour.

Superior Security

Palm vein patterns are stable throughout life and are not affected by external factors such as glasses, contact lenses, cuts/abrasions, dry skin or lotions. Veins are hidden under the skin and detection requires blood flowing through the veins, making forgery virtually impossible. Consumer acceptance is high since palm authentication is hygienic, intuitive and easy.

Flexible Deployment

Verifast Access is a scalable solution that is interoperable with other systems you may use. It can be configured to your specific requirements. Permission-based access allows you to limit entry to specific premises or areas.

Additional Features

In addition to facility access, the technology offers other features to make managing your branches more efficient.

- User information: Every Verifast Access scan creates a log file that includes the scan time, date, user ID and location. This data can be provided via XML and integrated with your payroll systems for automated, real-time information. Reports are easy to create and customize to your specific requirements.

Fiserv is driving innovation in Payments, Processing Services, Risk & Compliance, Customer & Channel Management and Insights & Optimization. Our solutions help clients deliver financial services at the speed of life to enhance the way people live and work today. Visit fiserv.com to learn more.

- Integration methods: A choice of integration methods is available including XML, socket, Wiegand or application program interface (API). A selection of scanner casings is available to meet the access needs of your indoor or outdoor facilities. In many instances, existing wiring can be used.
- Shift and role management: User enrollment is straightforward yet comprehensive, allowing you to quickly gather information needed to manage location access and expand the use of Verifast Access to include timekeeping, user shift management and role management.

Key Benefits

- Increased security through advanced biometric technology
- More reliable authentication than other biometric methods
- Efficient identity and access management system
- A simple, convenient and responsive user experience
