Get Advanced Protection Against and Faster Response to Increasingly Targeted Cyberattacks

## Product

Financial institutions are under constant attack from agile and well-funded adversaries. Protecting sensitive data from increasingly targeted cyberattacks and fast-moving threats is critical to being trusted as a financial institution.

CyberProtect from Fiserv offers a level of protection previously available to only the largest banks and government agencies. Designed by veterans of the financial and cybersecurity industries, CyberProtect is offered in partnership with BlueVoyant and provides clients leading-edge protection through world-class cybersecurity expertise specifically created for the unique challenges of financial institutions.

### Setting the Cybersecurity Standard

CyberProtect provides proactive detection combined with real-time remediation, advanced cybersecurity tools, an interactive portal and compliance solutions backed 24/7 by world-class experts in geographically diverse Security Operations Centers (SOC).

### Unrivaled Visibility

In today's financial landscape, every second counts when your institution is under attack. That's why we built a customizable portal into CyberProtect, delivering a single and comprehensive vantage point of your institution's cybersecurity. Whether you're interested in knowing about active threats against your business, actions taken to protect you, or recommendations to prevent reoccurrences, CyberProtect offers a complete snapshot of your cybersecurity.

### Next-Generation Managed Cybersecurity

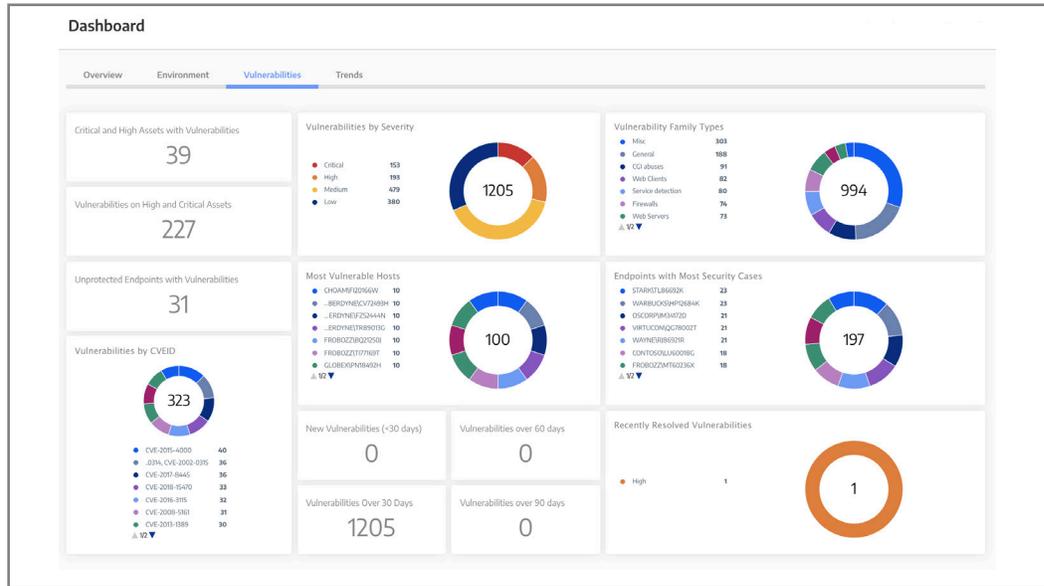

CyberProtect helps you protect against cyberattacks specifically targeting your financial institution's vulnerabilities and

### Key Benefits

- **Reduce risk** – By orchestrating activity across previously disparate modules, CyberProtect strengthens defenses
- **Gain efficiencies** – Automated and remote remediation frees you to focus resources on building business value
- **Respond faster** – Intelligible and actionable alerts eliminate cybersecurity noise and uncoordinated alerts
- **Simplify vendor management** – By monitoring and managing all network cybersecurity solutions, CyberProtect lowers costs, reduces complexity and strengthens security
- **Ease regulatory burdens** – Portal built specifically for your financial institution provides easy access to the information auditors demand
- **Find the best fit** – From must-have Essentials to the recommended Advanced option, CyberProtect scales to accommodate your evolving needs

your network is monitored 24/7 from security operations centers across the globe. CyberProtect enables you to focus your valuable IT resources on business growth and strategic opportunities rather than monitoring, managing and maintaining disparate cybersecurity modules.

Gain an immediate understanding of cyberthreats, actions taken and remediation.

### Deeper Intelligence for Quick Response

CyberProtect can increase your protection levels, offering access to exclusive threat intelligence, including dark web and host-based threat data. Real-time incident response, internet-scale threat intelligence and security event automation promote quick and decisive action and intelligible and actionable alerts are easy to understand so you can respond quickly and efficiently. The solution also enables you to identify unauthorized systems, applications and use of privileged credentials, in real time, across your network. With CyberProtect, you can

stop breaches before they occur, and protect your organization against both malware and non-malware attacks.

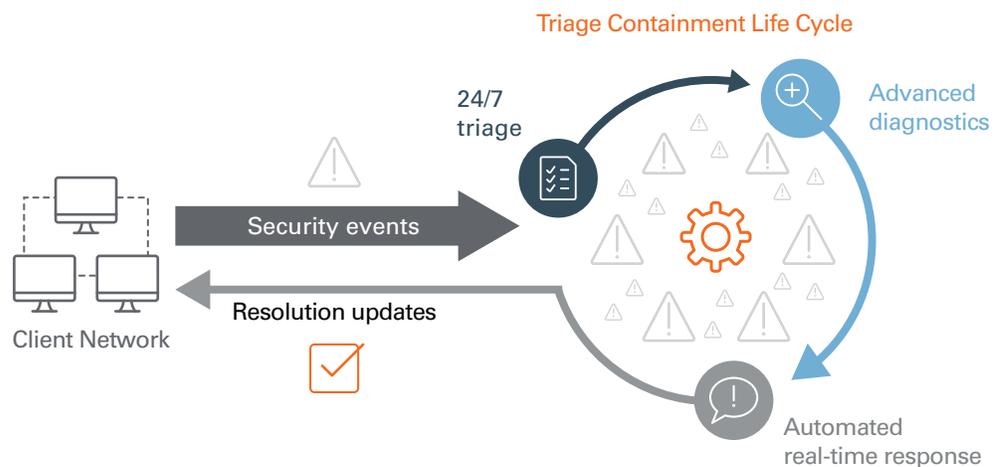

### Cybersecurity for Today and Tomorrow

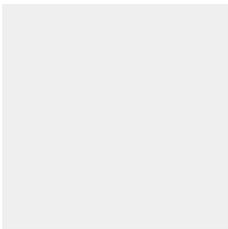

In an increasingly connected and digitally dependent world, every financial institution must achieve the highest levels of cybersecurity. CyberProtect allows you to cost-effectively leverage world-class cybersecurity solutions and professionals, formerly with the NSA, FBI, and British and Israeli intelligence agencies. Put our cybersecurity expertise to work for your institution.

Most traditional managed security service providers offer siloed detection and response, and they pass the remediation on to you. Fiserv provides early detection to full remediation to save you time and keep you secure and compliant.

### Managed Detection and Response

Early detection to full remediation through a single portal

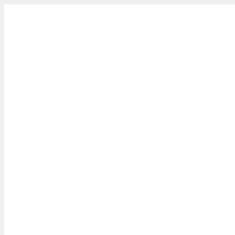

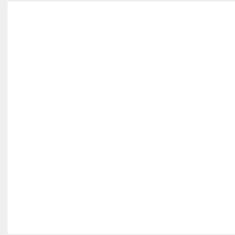

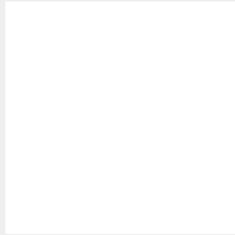

From "must-have" Essentials to the recommended Advanced and even Comprehensive modules, CyberProtect scales to meet your evolving needs.

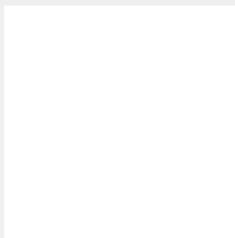

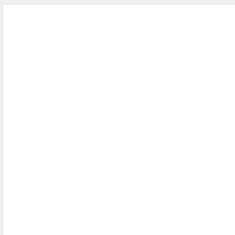

Options	
<b>CyberProtect: Essentials</b>	Our Essentials service includes endpoint-based Managed Detection and Response (MDR) utilizing either Carbon Black Defense or CrowdStrike Falcon Prevent powered by our cloud-based security orchestration, automation and response platform. Essentials is managed by 24/7, geographically diverse security operations centers. Alerts are generated, prioritized and investigated with full transparency through our client portal, enabling our customers to review on-going security alerts and investigations in near real time and to review historical trends on the network.
<b>CyberProtect: Advanced</b>	Our Advanced service combines Essentials with security information and event management. The Advanced service can either be cloud-based security event monitoring powered by Splunk or a full cloud-based, co-management of Splunk. The combined services enable us to collect, aggregate and correlate across all your data sources to include endpoint, network, and critical applications to provide comprehensive visibility and detection across your on-premises and cloud environments.
<b>CyberProtect: Comprehensive</b>	Services within the Comprehensive package include Advanced and ala cart modules such as Managed Email Protection with Data Loss Prevention (DLP) software and Managed Domain Name Service (DNS) Security.

Features	
<b>Global Security and Threat Operations</b>	24/7 always-on, cloud-based operations and threat analysis.
<b>Advanced Endpoint Defense</b>	Capabilities to automatically detect, block, and contain malware, ransomware, zero-days, non-malware and fileless attacks.
<b>Real-Time Incident Response</b>	Real-time, remote endpoint incident response led by investigators and cyber intelligence experts.
<b>Security Event Automation</b>	Orchestration and automation of security alerts to triage and reduce false positives to focus on real threats.
<b>Advanced Threat Intelligence</b>	"Outside the Enterprise" internet and dark web threat intelligence alerts utilizing the largest databases of activity.
<b>Executive and Threat Intelligence Reports</b>	Access to operational and threat intelligence reports to understand your security program health and risk.
<b>Vulnerability Detection</b>	Regular scanning of computers, servers and networks to identify vulnerabilities for machines at risk.
<b>Compliance Reporting</b>	Robust compliance risks and reports tailored to your company and security program.
