Verifast™ Kiosk

Prevent Fraud, Reduce Transaction Times and Improve Convenience Using Powerful Biometric Authentication

Implementing measures to combat fraud without infringing on convenience is a delicate balance. Verifast Kiosk from Fiserv uses the latest biometric technology to help you mitigate fraud and provide the convenience of self-service for your account holders.

As financial institutions transform their retail environment with self-service features, Verifast Kiosk is unparalleled for its ease of use and convenience. Freeing your account holder from having to insert their card and remembering yet another PIN, they can now just scan their palm at Interactive Branch Kiosk from Fiserv to securely connect to their financial accounts.

Interactive Branch Kiosk is an automated teller management device that allows financial institutions to streamline branch operations by moving many or most teller transactions to self-service channels. Branch staff are empowered to focus more on high-value consultations and relationships with accountholders instead of manual, processing transactions.

How It Works

Verifast Kiosk reads complex vein patterns to identify and authenticate your accountholders. Once they scan their palm, they are given instant access to their financial accounts.

With the wide use of touch ID, most consumers are comfortable with this identification method. Palm scanning feels natural, is more convenient and saves them time.

Reduced Transaction Times

Verifast Kiosk makes self-service for consumers easy, eliminating the need to retrieve cards from wallets or purses and remember PINs. This authentication method speeds up the transaction.

Superior Security

Palm vein patterns are stable throughout life and not affected by external factors such as glasses, contact lenses, cuts/abrasions, dry skin or lotions. Veins are hidden under the skin and detection requires blood flowing through the veins, making forgery virtually impossible. Palm vein scanning is a highly reliable method of identification. Palm vein patterns are complex with greater than 5 million reference points, providing superior accuracy. Consumer acceptance is high since palm authentication is hygienic, intuitive and easy.

Improved Service and Satisfaction

Verifast Kiosk gives consumers highly secure and convenient self-service access to their accounts. Because it speeds transactions, accountholders can get on with their lives.

Fiserv is driving innovation in Payments, Processing Services, Risk & Compliance, Customer & Channel Management and Insights & Optimization. Our solutions help clients deliver financial services at the speed of life to enhance the way people live and work today. Visit fiserv.com to learn more.

Key Benefits

- Reduces the risk of fraud using advanced biometric authentication technology
- Provides secure, accurate access to accountholder information
- Reduces need for card and PIN, which reduces transaction times
- Improves satisfaction by speeding transactions and demonstrating a commitment to protect personal data
