Verifast™

A Suite of Biometric Identification Solutions to Elevate Security and Convenience for Your Enterprise

Implementing measures to combat fraud and security without hampering your accountholder or employee experience is a tricky balance. Verifast from Fiserv uses the latest biometric technology to help keep you secure physically, digitally and financially.

How It Works

A highly reliable means of personal identification, Verifast uses biometric technology to scan the vein pattern of the palm. Vein pattern recognition technology has become a more accurate identifier than finger prints, iris patterns or facial features – proving a private and secure way to identify customers and employees.

Superior Security

Palm vein patterns are stable throughout life and are not affected by external factors such as glasses, contact lenses, cuts/abrasions, dry skin or lotions. Veins are hidden under the skin and detection requires blood flowing through the veins, making forgery virtually impossible. Consumer acceptance is high since palm authentication is hygienic, intuitive and easy.

Reliable Authentication

Palm vein scanning is a highly reliable method of identification. Palm vein patterns are complex with greater than five million reference points providing superior accuracy. Palm authentication provides highly precise and secure biometric recognition, allowing for nearly 100 percent identification accuracy.

Verifast is available for the following channels.

Verifast Branch

Verifast Branch uses the latest biometric technology to help financial institutions mitigate fraud while reducing transaction times and enhancing the branch experience.

Verifast Access

Verifast Access offers a highly secure, reliable and easy-to-use way to control and monitor physical access to business premises or sensitive areas.

Verifast SSO

Verifast SSO makes it possible for employees to securely log in to any application or website simply by using the sensing device instead of manually keying their passwords.

Verifast Kiosk

Verifast Kiosk uses the latest biometric technology to verify identity and provide access to financial accounts through fully integrated Interactive Branch Kiosks, which are self-service kiosks that can automate many traditional branch transactions to expand your self-service capabilities.

The kiosks allow consumers access to every account, the same funds as on a teller line, and provide complex banking task support.

Fiserv is driving innovation in Payments, Processing Services, Risk & Compliance, Customer & Channel Management and Insights & Optimization. Our solutions help clients deliver financial services at the speed of life to enhance the way people live and work today. Visit fiserv.com to learn more.

Key Benefits

- Reduces the risk of fraud using advanced biometric authentication technology
- Delivers strong ROI through efficiency gains
- Identifies users more reliably than other biometric methods
- Supports existing network and IT infrastructure with minimal IT cost to deploy
- Provides increased security through advanced biometric technology
- Offers more reliable authentication than other biometric methods
- Delivers a simple, convenient and responsive user experience
