### Verifast™ SSO

Access the Applications You Use Every Day With a Scan of Your Palm

Verifast SSO from Fiserv uses the latest biometric technology to enable your employees to access their applications securely and quickly without typing any passwords.

The use of passwords is a relic of the mainframe days. Passwords are not a good mechanism for security – just look at the vast number of passwords that hackers leak every week.

With Verifast SSO, your palm is your password. Repetitive password entry is replaced with a secure biometric scan of the employee's palm as it is placed over the sensing device – instantly connecting you to your applications. In addition to happier and more productive employees, IT staff are unburdened from technical support for password lockouts and reset requests.

#### How it works

Verifast SSO can read the complex vein patterns in the palm. Any time a password is required, your employee simply scans his or her palm. The vein pattern under the skin is matched in the secure database and your employee is logged in. Verifast SSO uses a

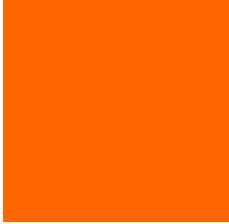

biometric mouse to identify your employee as part of their normal activities. The solution can be used to access your network, applications and websites. Each person's vein pattern is unique and more accurate than fingerprints, iris patterns or facial features – providing a private and secure way to identify employees.

#### Enhances employee effectiveness

Employees save time by not having to login and remember yet another password. Financial service representatives can focus on serving accountholders, rather than interacting with technology. IT staff can support network operations and technology initiatives, rather than devoting time to password reset requests.

#### Strengthens security

Palm authentication is practical, hygienic and secure. Unlike other biometric methods, palm vein patterns are not affected by external factors such as glasses, scratches, cuts, dry skin, lotion or abrasions. The palm scan detects the veins beneath the skin's surface when determining a match. This provides a more reliable means of identifying an employee compared with traditional methods, such as passwords and tokens.

Fiserv is driving innovation in Payments, Processing Services, Risk & Compliance, Customer & Channel Management and Insights & Optimization. Our solutions help clients deliver financial services at the speed of life to enhance the way people live and work today. Visit [fiserv.com](http://fiserv.com) to learn more.

### Key Benefits

- Eliminates the hassles of password management for employees across the enterprise
- Increases security by utilizing advanced biometric technology
- Frees up employees to focus on interacting with accountholders rather than technology
- Identifies users more reliably than other biometric methods
- Supports existing network and IT infrastructure with minimal IT cost to deploy
- Offers ease of use through integration with a standard USB mouse
