

Enterprise Payments Platform

A Single, Centralized Platform
for Payment Types and Clearing
Schemes in Asia Pacific

Your payments business can be a competitive advantage – if your payments infrastructure delivers fast, efficient processing and connectivity across channels, payment types and clearing schemes. Enterprise Payments Platform from Fiserv delivers streamlined payments processing on a single, integrated technology platform.

Enterprise Payments Platform helps you exceed customer expectations for all non-card payment types including SWIFT, wire, high-value, ACH, low-value and real-time payments.

Moving to an ISO 20022 and gpi-compliant centralized payments system simplifies your IT and payments architecture by replacing multiple siloed payments systems and facilitating process automation. With a single system for reporting, customer service, payment operations and integration with other applications, you'll reduce operational costs.

Drive competitive differentiation through payments enhanced with value-added services and deliver those services regardless of how your customer engages with you.

Increase Speed and Minimize Risk

Enterprise Payments Platform offers configurable routing and automated data enrichment. It increases straight-through processing and overall payment processing speeds while reducing the need for manual intervention – meaning you can process significantly more payments at a lower overall cost.

The result is faster, more accurate and more complete data, reduced risk exposure and improved regulatory reporting. Your customers benefit from faster transactions and greater visibility into their accounts for an improved service experience.

Consumer expectations, competition and regulatory pressures require your financial institution to keep moving forward to keep up. Build a progressive payments experience that positions you for the future with Fiserv.

Process All Payment Types

Process all payments including wire, real-time and ACH on a single platform.

Wire Payments

Process domestic and international wires via SWIFT with an ISO 20022 and SWIFT gpi-compliant solution. The platform offers high STP rates, real-time debit and credit and account notifications with optimized processing efficiency and reduced operating costs.

Configurable routing and automated data enrichment and repair capabilities help increase overall payment processing speeds and reduce manual intervention.

Real-Time Payments

Enterprise Payments: RTP delivers real-time payments processing across any instant clearing mechanism. You can now offer 24/7/365 payments with immediate funds availability and payment certainty, enabling both retail and commercial customers to send and receive payments instantly right from their accounts.

Enterprise Payments: RTP supports the full range of The Clearing House messaging capabilities including Request for Payment, Request for Information and Response, Request for Return of Funds and Remittance Advice. With access to the full Enterprise Payments: RTP messaging suite, more information can be sent with transactions, including invoicing and ebilling information and extensive remittance detail. This improves the speed, security and efficiency of every transaction.

ACH Payments

Originate and receive ACH payments while reducing operational complexity with automated rules-based handling. Enterprise Payments: ACH streamlines workflow processing, clearing and settlement.

Based on the market-leading ACH solution PEP+[®] from Fiserv, Enterprise Payments: ACH provides continuous collection of inbound files/batches and items, eliminating batch-based window processing and accelerating processing time.

Exceptions are categorized in pools on the user interface and can be worked interactively in real time. The solution can support domestic ACH systems such as NACHA, EBA STEP2, U.K. Bacs and many other deferred settlement systems. Consolidated settlement at both the file/batch and item level are supported.

Get the Flexibility You Need

Financial institutions vary greatly in payment volumes, complexity and operating requirements. Enterprise Payments Platform adapts to your needs as you grow. It easily connects to upstream and downstream systems, from account processing and foreign exchange to fraud and anti-money laundering.

Our rich suite of open APIs allows you to create personalized digital experiences by configuring workflows specific to payment channels, products and even individual customers.

A scalable, open-architecture platform provides centralized processing across multiple payment types and clearing schemes. You can use it as a point solution for one payment clearing or as a comprehensive payments platform on which to build a future-proof, digitally enabled payments strategy.

Streamline Implementation

You can implement the platform as an on-premise, cloud or hosted (ASP) solution depending on your needs. Our experienced implementation team, equipped with deep knowledge of payments, makes the process as simple as possible. Installation, configuration and integration are tailored to the complexities of your project and institution. We focus on delivering on-time with the business configuration and training you need to succeed.

Drive Your Payments Strategy

Financial institutions are evaluating their payments strategies with respect to upcoming ISO 20022 changes, demand for real-time payments and the need for cost-effective consolidation. A platform that handles multiple payment types not only helps improve processing efficiency and reduce operating costs, it can also facilitate competitive differentiation.

With Enterprise Payments Platform underpinning your payments strategy, you can simplify and accelerate your entire payments business. Whether you do it step-by-step or all at once, you can be confident that as the payments landscape evolves, you are positioned to compete.

Get Advanced Insights

Enterprise Payments Platform provides an easy, intuitive user experience and advanced insights into processing performance. Dashboards display real-time data on system health, exception handling, liquidity management and other critical processes. Extensive drill-down capabilities get you quickly up-to-speed on what is working well and what needs attention.

A Strong Foundation for the Future

As a global fintech leader, Fiserv helps people and businesses move money and information every minute of every day. Our solutions connect financial institutions, corporations, merchants and consumers to one another – millions of times a day, reliably and securely.

We serve thousands of organizations in more than 100 countries so consumers and businesses can move money when and where they need it. When you partner with Fiserv, our solutions, global scale and investment capacity provide you with unparalleled opportunities for growth and success.

Key Benefits:

- Provides a centralized, 24/7/365 payment system integrated with multiple clearings and payment schemes
- Offers the same seamless customer experience across all payments
- Shows a 360-degree view of payments activity
- Extends to new payment types quickly and efficiently
- Provides a single system for reporting, customer service and payment operations, minimizing total costs
- Helps keep you compliant with industry and regulatory changes
- Easily connects to upstream and downstream systems through an open architecture
