

# Check Fraud Defender

In partnership with Mitek

**Combat check fraud with greater accuracy and process checks more efficiently.**

**Check Fraud Defender delivers powerful fraud signals using advanced computer vision technology to help financial institutions protect both their customers and their organizations from increasingly sophisticated fraud attacks. By combining the strength of industry-leading check imaging products with cloud-hosted services expertise, the solution quickly and accurately detects synthetic, forged and stolen checks, reducing fraud losses while minimizing the number of checks routed for manual review. This results in improved processing efficiency.**

## Reduce check fraud

Leverage patented imaging science, machine learning and artificial intelligence to validate deposited checks securely and more accurately.

## Accelerate reviews

Actionable insights provided by Mitek help reviewers validate checks faster and more efficiently.

## Decrease operational costs

Proprietary visual inspection modeling helps reduce manual review with automated and more accurate check fraud detection.

## Simplify implementation

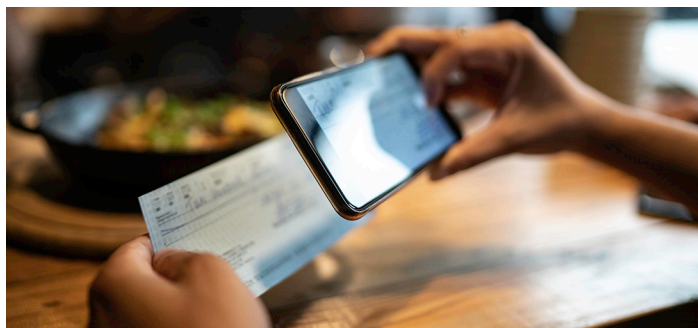

Check Fraud Defender is an AI-powered cloud-hosted service that easily complements existing check processing workflows.

## Minimize false positives

The visual-based system inspects more document attributes, so fewer checks are flagged for further inspection, resulting in reduced false positives.

## Stay ahead of fraudsters

A cloud-hosted, secure data consortium creates a shared truth database that helps financial institutions keep pace with ever-evolving fraud patterns.

## AI powered inspection

Inspect and analyze check images received from all channels, including mobile deposit, in-branch and ATMs. Evaluating document attributes traditional systems typically miss and detects fraud earlier.

## Cloud-hosted network

Compare multiple check attributes with check profiles stored in a secure cloud repository used by participating financial institutions. A shared truth database improves accuracy of scoring and enables real-time decisioning.

## Flexible and configurable

This cloud-hosted service complements existing fraud-fighting systems and protocols with minimum integration effort. You can easily configure specific alerts for centralized decision making.

## Find check fraud faster and reduce financial losses

Check Fraud Defender scores more than 20 attributes beyond basic account data, including typography, handwriting and signatures.

Sophisticated check fraudsters use alterations and other counterfeiting techniques that are difficult for a human to see, so fraudulent check deposits often slip through review checkpoints, costing financial institutions millions of dollars each year.

As part of the Check Fraud Defender platform, the MiControl Fraud Management Console improves back-office efficiency by providing financial institutions with a comprehensive dashboard that features proprietary visualizations to quickly detect, analyze and stop incoming check fraud.

## Key benefits

- ISO 27001 certified
- End-to-end encryption
- Cloud infrastructure ensures 99.995% uptime
